# Foxboro® Model 9700A Magnetic Flow Sensor

The 9700A magnetic flow sensor can be used with IMT30A, IMT31A and IMT33A magnetic flow converters.

- ▶ Robust, fully welded construction for industrial process applications
- ▶ For demanding applications including corrosive, abrasive and high pressure
- ▶ Engineered constructions for customer specific solutions

## 1.1 The all-round solution for process industries

The **9700A** design meets the demands of a very wide range of applications in industries including the chemical, pulp & paper, water and wastewater, minerals and mining, iron, steel and metals, pharmaceuticals and oil & gas industry.

The 9700A has a field proven and unsurpassed lifetime. This is assured by the fully welded construction, full bore pipe construction, absence of moving parts and wear resistant liner materials. Even for demanding applications in harsh environments or with aggressive and abrasive media the 9700A can offer a solution.

Examples include sub-sea installations, slurries with very high solids contents, alkaline solutions and acids, up to chemical dosing, bleaching, colouring, and black liquor in the paper industry..

- ① Robust fully welded construction
- ② Diameter range: DN10...2000 3/8 ... 80"
- ③ PFA, PTFE, ETFE, PU, hard rubber and soft rubber liners
- 4 Hastelloy, titanium, tantalum, stainless steel, platinum and low noise electrodes

#### Highlights

- Trusted and accepted flow sensor for all process applications
- Proven in use and unsurpassed lifetime
- All welded rugged construction, to extend lifetime of equipment
- Good corrosion, erosion / abrasion resistance
- Wide choice of materials for electrodes including Hastelloy, Tantalum, Platinum
- Corrosion resistant and leak tight electrodes.
- Reliable measurement under very demanding conditions: including high temperatures up to 180°C / 356°F, high solids contents (up to 70%)
- · Bi-directional flow metering
- Wide range of approvals for hazardous areas
- · No grounding rings with virtual reference option on IMT33A
- Extensive diagnostic capabilities

#### **Industries**

- Chemicals
- Pulp & Paper
- Minerals & Mining
- Oil & gas
- Iron, Steel & Metals
- Water and wastewater
- Pharmaceuticals

#### **Applications**

- For clean liquids
- For slurries and pastes with high solids content
- For abrasive and aggressive products

5

# 1.2 Options

## The solution for any industry

#### From standard to customized

For easy ordering the standard range of the 9700A covers all popular sizes, materials and coatings. Process connections are available in EN 1092-1 (up to PN40), ASME B16.5 and JIS (20K).

### Easy installation

Fitting the 9700A is easy with the flanged design and standard ISO insertion lengths. To further ease the operation, the 9700A can be installed without filters and straighteners. Even grounding rings are not required with the patented "Virtual Reference" option on the IMT33A converter.

#### IP68

Installation in measurement chambers subject to (constant) flooding is possible with the IP68 rated version. .

## 1.3 Measuring principle

An electrically conductive fluid flows inside an electrically insulated pipe through a magnetic field. This magnetic field is generated by a current, flowing through a pair of field coils. Inside of the fluid, a voltage U is generated:

U = v \* k \* B \* D

#### in which:

v = mean flow velocity

k = factor correcting for geometry

B = magnetic field strength

D = inner diameter of flowmeter

The signal voltage U is picked off by electrodes and is proportional to the mean flow velocity v and thus the flow rate Q. A signal converter is used to amplify the signal voltage, filter it and convert it into signals for totalizing, recording and output processing.

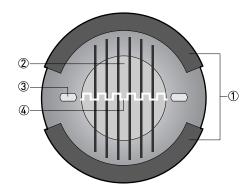

Figure 1-1: Measuring principle

- ① Field coils
- 2 Magnetic field
- 3 Electrodes
- 4 Induced voltage (proportional to flow velocity)

## 2.1 Technical data

- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local sales office.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website.

### Measuring system

| Measuring principle      | Faraday's law                  |  |
|--------------------------|--------------------------------|--|
| Application range        | Electrically conductive fluids |  |
| Measured value           |                                |  |
| Primary measured value   | Flow velocity                  |  |
| Secondary measured value | Volume flow                    |  |

### Design

| Features             | Fully welded maintenance-free flow sensor.   |
|----------------------|--|
|                      | Flange version with full bore flow tube.   |
|                      | Standard as well as higher pressure ratings.   |
|                      | Broad range of nominal sizes.  |
|                      | Industry specific insertion lengths.   |
| Modular construction | The measurement system consists of a flow sensor and a signal converter. It is available as compact and as separate version. |
| Compact version      | With signal converter IMT30A: 9700A + IMT30A 4   |
|                      | With signal converter IMT31A: 9700A + IMT31A 4   |
|                      | With signal converter IMT33A: 9700A + IMT33A 4   |
| Remote version       | In wall (W) mount version with signal converter IMT30A: 9700A + IMT30A N   |
|                      | In wall (W) mount version with signal converter IMT31A: 9700A + IMT31A N   |
|                      | In field (F) or wall (W) mount version with signal converter IMT33A: 9700A + IMT33A H or N                                   |
| Nominal diameter     | With signal converter IMT30A: DN10 1200 / 3/848"   |
|                      | With signal converter IMT31A: DN10 1200 / 3/848"   |
|                      | With signal converter IMT33A: DN10 2000 / 3/880"   |

# Measuring accuracy

| Depending on signal converter and DN size.   |
|--|
| IMT30A: down to 0.5% of the measured value ± 1 mm/s  |
| IMT31A: down to 0.3% of the measured value ± 1 mm/s  |
| IMT33A: down to 0.2% of the measured value ± 1 mm/s  |
| The additional typical measuring deviation for the current output is $\pm 10~\mu A$ .                            |
| The maximum measuring error depends on the installation conditions.  |
| For detailed information refer to <i>Measurement accuracy</i> on page 15.  |
| ± 0.1% of MV, minimum 1 mm/s   |
| Standard:  |
| 2 point calibration by direct volume comparison.   |
| Optional:  |
| Verification to Measurement Instrument Directive (MID), Annex III (MI-001). Check BuyAutomation for availability |
| (Only in combination with signal converter IMT33A)   |
| ± 0.1% of MV   |
|  |

# Operating conditions

| Temperature                   |  |
|-------------------------------|--|
| For Ex versions different ten | nperatures are valid. Please check the relevant Ex documentation for details.                        |
| Process temperature           | PTFE / PFA: -40+180°C / -40+356°F for remote versions  |
|                               | PTFE / PFA: -40+140°C /-40+284°F for IMT33A compact versions   |
|                               | PTFE / PFA: -40+120°C /-40+248°F for IMT30A and IMT31A compact versions                              |
|                               | ETFE: -40+120°C / -40+248°F  |
|                               | Hard rubber: -5+80°C / 23+176°F  |
|                               | Soft rubber: -5+60°C / 23+140°F  |
|                               | PU: -5+65°C / 23+149°F   |
|                               | For more information about temperatures see the temperature table in the manual.                     |
| Ambient temperature           | Standard (with aluminum signal converter housing):   |
|                               | -40+65°C / -40+149°F   |
|                               | Protect electronics against self-heating with ambient temperatures above +55°C / +131°F.             |
|                               | <b>Option</b> (with stainless steel signal converter housing): Check BuyAutomation for availability. |
|                               | -40+55°C / -40+130°F   |
| Storage temperature           | -50+70°C / -58+158°F   |
| Measuring range               | -12+12 m/s / -40+40 ft/s   |
| Pressure                      |  |
| EN 1092-1                     | DN12002000: PN6  |
|                               | DN2001000: PN10  |
|                               | DN65 and DN100150: PN16  |
|                               | DN1050 and DN80: PN40  |
|                               | Other pressures on request.  |
| ASME B16.5                    | 3/840": 150 lb RF  |
|                               | Other pressures on request.  |
| JIS                           | DN501000 / 240": 10 K  |
|                               | DN1040 / 3/81½" : 20 K   |
|                               | Other pressures on request.  |
| Vacuum load                   | For detailed information refer to Vacuum load on page 23.  |
| Pressure loss                 | Negligible   |

| Chemical properties                |                                 |
|------------------------------------|---------------------------------|
| Physical condition                 | Electrically conductive liquids |
| Electrical conductivity            | Water: ≥ 20 μS/cm               |
|                                    | Standard: ≥ 1 μS/cm             |
| Permissible gas content (volume)   | IMT30A: ≤ 3%                    |
|                                    | IMT31A: ≤ 5%                    |
|                                    | IMT33A: ≤ 5%                    |
| Permissible solid content (volume) | IMT30A: ≤ 10%                   |
|                                    | IMT31A: ≤ 10%                   |
|                                    | IMT33A: ≤ 70%                   |

### Installation conditions

| Installation           | Assure that the flow sensor is always fully filled.                         |
|------------------------|---|
|                        | For detailed information refer to <i>Installation</i> on page 24.           |
| Flow direction         | Forward and reverse.  |
|                        | Arrow on flow sensor indicates positive flow direction.                     |
| Inlet run              | ≥ 5 DN  |
| Outlet run             | ≥ 2 DN  |
| Dimensions and weights | For detailed information refer to <i>Dimensions and weights</i> on page 16. |

### Materials

| Flow sensor housing            | DN1015 / 3/8½": stainless steel 1.4408   |
|--------------------------------|--|
|                                | DN20 / ¾": GTW-S 30  |

| Random vibration test                            | IEC 68-2-34   |
| Shock test                                       | IEC 68-2-27   |

### 2.2 Measurement accuracy

Every electromagnetic flowmeter is calibrated by direct volume comparison. The wet calibration validates the performance of the flowmeter under reference conditions against accuracy limits.

The accuracy limits of electromagnetic flowmeters are typically the result of the combined effect of linearity, zero point stability and calibration uncertainty.

#### Reference conditions

• Medium: water

• Temperature: +5...35°C / +41...95°F

• Operating pressure: 0.1...5 barg / 1.5...72.5 psig

Inlet section: ≥ 5 DN
 Outlet section: ≥ 2 DN

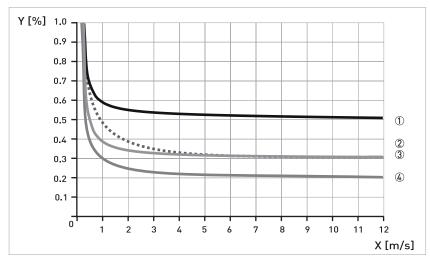

Figure 2-1: Flow velocity vs. accuracy

X [m/s]: flow velocity

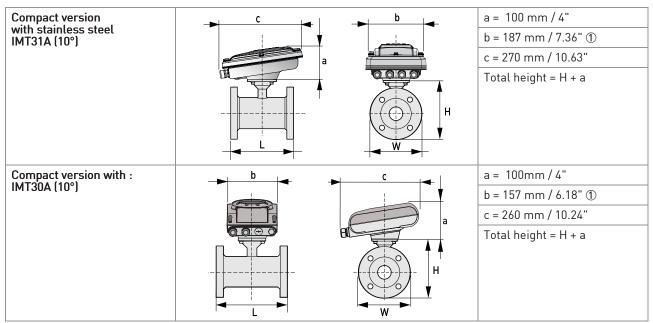

Y [%]: deviation from the actual measured value (mv)

#### Accuracy

| Flow sensor diameter                        | Signal converter type | Accuracy             | Curve |
|---|-----------------------|----------------------|-------|
| DN101600 / <sup>3</sup> / <sub>8</sub> 64"  | IMT33A                | ±0.2% of mv + 1 mm/s | 4     |
| DN18002000 / > 64"                          | IMT33A                | ±0.3% of mv + 2 mm/s | 3     |
| DN101200 / <sup>3</sup> / <sub>8</sub> 48"  | IMT31A                | ±0.3% of mv + 1 mm/s | 2     |
| DN101200 / <sup>1</sup> / <sub>10</sub> 48" | IMT30A                | ±0.5% of mv + 1 mm/s | 1     |

- 1 The value may vary depending on the used cable glands.
  - All data given in the following tables are based on standard versions of the flow sensor only.
  - Especially for smaller nominal sizes of the flow sensor, the signal converter can be bigger than the flow sensor.
  - Note that for other pressure ratings than mentioned, the dimensions may be different.
  - For full information on signal converter dimensions see relevant documentation.

- Pressures at 20°C / 68°F.
- For higher temperatures, the pressure and temperature ratings are as per ASME B16.5.

## 2.4 Pressure derating

The graphs below refer to the maximum pressure as a function of the temperature for the flanges of the flowmeter (per specified flange material).

Please note that the specified values only refer to the flanges. The maximum value for the flowmeter can further be limited by the maximum value for other materials (i.e. the liner)

For A = Carbon steel A 105 & B = Stainless steel 316L X/Y axes in all graphs; X = Temperature in [°C] / Y = Pressure in [bar] x/y axes in all graphs; <math>X = Temperature in [°F] / y = Pressure in [psi]

#### 3.1 Intended use

Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose.

The 9700A electromagnetic flowmeter is designed exclusively to measure the flow of electrically conductive, liquid media.

#### 3.2 General notes on installation

Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

Do a check of the packing list to make sure that you have all the elements given in the order.

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

#### 3.2.1 Vibration

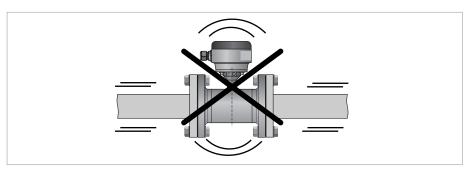

Figure 3-1: Avoid vibrations

### 3.2.2 Magnetic field

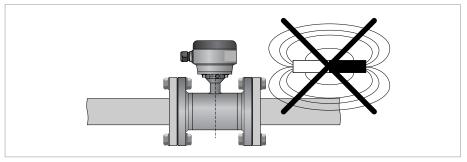

Figure 3-2: Avoid magnetic fields

### 3.3 Installation conditions

#### 3.3.1 Inlet and outlet

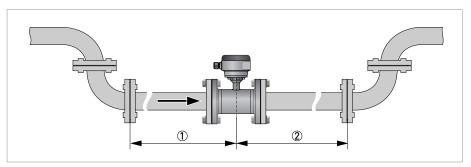

Figure 3-3: Recommended inlet and outlet

- ① Refer to chapter "Bends in 2 or 3 dimensions"
- ②  $\geq 2 DN$

#### 3.3.2 Bends in 2 or 3 dimensions

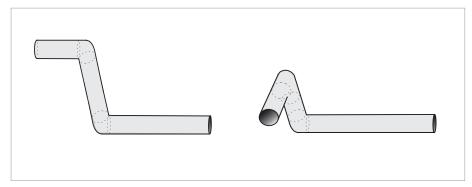

Figure 3-4: Inlet when using 2 and/or 3 dimensional bends upstream of the flowmeter Inlet length: using bends in 2 dimensions:  $\geq$  5 DN; when having bends in 3 dimensions:  $\geq$  10 DN

2 Dimensional bends occur in a vertical plane only, while 3 Dimensional bends occur in both vertical **and** horizontal plane.

### 3.3.3 T-section

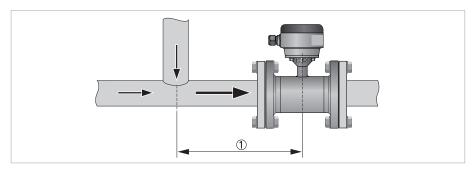

Figure 3-5: Distance behind a T-section

① ≥ 10 DN

### 3.3.4 Bends

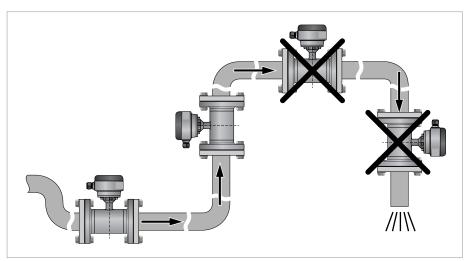

Figure 3-6: Installation in bending pipes

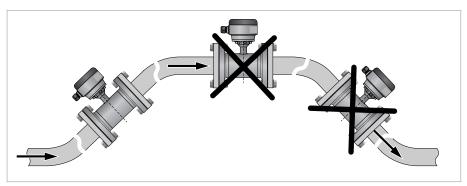

Figure 3-7: Installation in bending pipes

Avoid draining or partial filling of the flow sensor

## 3.3.5 Open feed or discharge

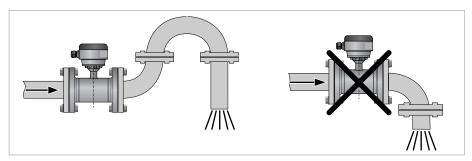

Figure 3-8: Installation in front of an open discharge

### 3.3.6 Flange deviation

Max. permissible deviation of pipe flange faces:  $L_{max}$  -  $L_{min} \le 0.5 \text{ mm} / 0.02$ "

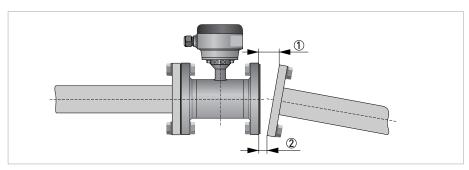

Figure 3-9: Flange deviation

- ①  $L_{max}$
- $\ \ \textbf{2} \ \ L_{min}$

## 3.3.7 Pump

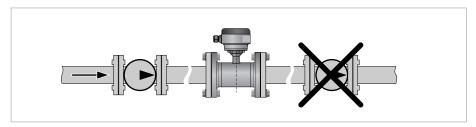

Figure 3-10: Installation behind a pump

### 3.3.8 Control valve

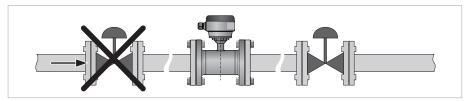

Figure 3-11: Installation in front of a control valve

# 3.3.9 Air venting and vacuum forces

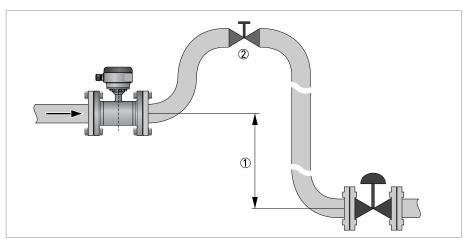

Figure 3-12: Air venting

- $\bigcirc$   $\geq$  5 m / 17 ft  $\bigcirc$  Air ventilation point

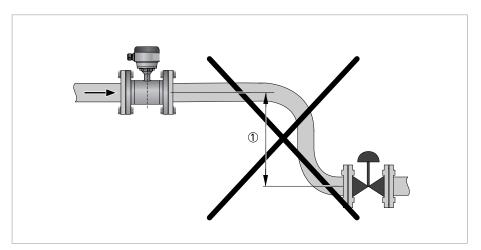

Figure 3-13: Vacuum

①  $\geq 5 \text{ m} / 17 \text{ ft}$ 

## 3.3.10 Mounting position

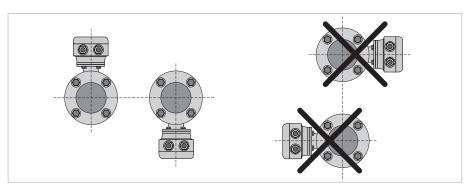

Figure 3-14: Mounting position

- Mount flow sensor either with signal converter aligned upwards or downwards.
- Install flow sensor in line with the pipe axis.
- Pipe flange faces must be parallel to each other.

## 3.4 Mounting

Please take care to use the proper gasket to prevent damaging the liner of the flowmeter. In general, the use of spiral wound gaskets is not advised, as it could severely damage the liner of the flowmeter.

### 3.4.1 Torques and pressures

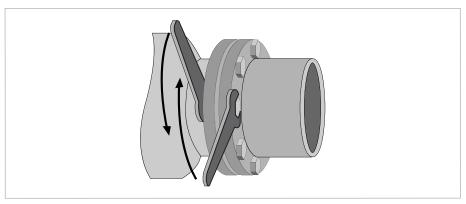

Figure 3-15: Tightening of bolts

### Tightening of bolts

- Always tighten the bolts uniformly and in diagonally opposite sequence.
- Do not exceed the maximum torque value.
- Step 1: Apply approx. 50% of max. torque given in table.
- Step 2: Apply approx. 80% of max. torque given in table.
- Step 3: Apply 100% of max. torque given in table.

Other sizes / pressure ratings on request.

① The specified torque values are dependent on variables (temperature, bolt material, gasket material, lubricants, etc.) which are not within the control of the manufacturer. Therefore the values should be regarded as indicative only.

Other sizes / pressure ratings on request.

- Pressures are applicable at 20°C / 68°F.
- For higher temperatures, the pressure ratings are as per ASME B16.5.

② F= ASTM gr B7 Studbolts - F=0.14 - Carbon steel flanges

③ Information \*; please contact the support service department

## 4.1 Safety instructions

All work on the electrical connections may only be carried out with the power disconnected. Take note of the voltage data on the nameplate!

Observe the national regulations for electrical installations!

Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

## 4.2 Grounding

The device must be grounded in accordance with regulations in order to protect personnel against electric shocks.

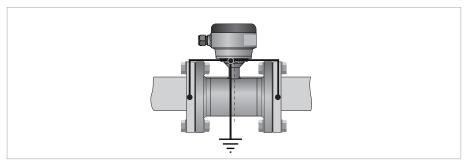

Figure 4-1: Grounding

① Metal pipelines, not internally coated. Grounding without grounding rings.

Figure 4-2: Different types of grounding rings

- ① Grounding ring number 1
- ② Grounding ring number 2
- ③ Grounding ring number 3

### Grounding ring number 1:

• Thickness: 3 mm / 0.1" (tantalum: 0.5 mm / 0.02")

### Grounding ring number 2:

- Thickness: 3 mm / 0.1"
- Prevents damage to the flanges during transport and installation
- Especially for flow sensors with PTFE liner

### Grounding ring number 3:

- Thickness: 3 mm / 0.1"
- With cylindrical neck (length 30 mm / 1.25" for DN10...150 / 3/8...6")
- Offers liner protection against abrasive fluids

## 4.3 Virtual reference for IMT33A (4, N and H version)

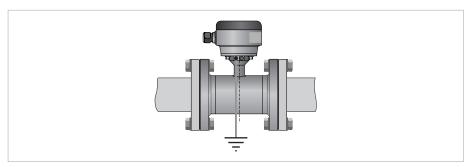

Figure 4-3: Virtual reference

### Minimum requirements:

- Size: ≥ DN10 / 3/8"
- Electrical conductivity:  $\geq$  200  $\mu$ S/cm
- Signal cable: max. 50 m / 164 ft, type DS

## 4.4 Connection diagrams

For the connection diagrams please refer to the documentation of the applicable signal converter.

9700A NOTES 6

#### ORDERING INSTRUCTIONS

- 1. Model Number.
- 2. Flow Data:
  - a. Maximum, minimum, and normal flow rate.
  - b. Fluid composition and viscosity at operating temperatures.
  - c. Fluid density or relative density (specific gravity).
  - d. Maximum, minimum and normal operating temperatures.
  - e. Maximum, minimum and normal operating pressures.
  - f. Mating pipe schedule.
  - g. Type and location (distance) of upstream disturbance.
- 3. Calibration Information (analog output only); maximum flow rate 20 mA output.
- 4. Electric Classification.
- 5. Optional Selections and Accessories.
- 6. Customer Tag Data.
